

Arjun G

Senior Software Engineer

arjun.gopinath06@gmail.com | +91-7994621357 | Kochi, Kerala | [Github](#) | [Portfolio](#)

PROFILE

Full Stack Engineer with 5 years building scalable, data-intensive products across fintech and healthcare. Strong in React, TypeScript, and frontend architecture — with hands-on backend experience in Node.js, and Python. Track record of owning features end to end, collaborating across product and engineering teams, and delivering AI-powered solutions.

SKILLS

Frontend: React, Next.js, TypeScript, JavaScript (ES6+), Redux, Tailwind CSS, Material UI, HTML5, CSS3, Webpack, ESLint, WCAG 2.1
Backend: Python, FastAPI, SQLAlchemy ORM, Node.js, Express.js, REST APIs, RabbitMQ, JWT, OAuth, RBAC, audit logging, API versioning
Databases: PostgreSQL — schema design, indexing, query optimisation, migrations · MySQL · MongoDB
DevOps & Test: TDD, Jest, JUnit, Mockito, pytest, Cypress, Docker, Kubernetes, CI/CD, Git, observability
Architecture: Micro Frontend Architecture (Module Federation), Design Patterns, Performance Optimization, i18n, BFF
Practices & AI: Agile/XP, TDD, Pair Programming, LLM, RAG, Prompt Engineering, RAG pipelines, AI assisted development

EXPERIENCE

Software Developer · Ransky Tech

Feb 2026 – Apr 2026

- Built trading dashboards in React and TypeScript that pulled live data from multiple exchange APIs — normalizing formats across sources and keeping rendering fast enough for real-time P&L tracking.
- Coded in Node.js and Python services to automate daily report generation — traders were reconciling data manually before this, which took hours each day.
- Worked directly with backend engineers to define API contracts, then took full ownership of the frontend implementation through to delivery.

Application Developer – Senior Consultant · Thoughtworks

Aug 2024 – Jan 2026

- Led frontend development of a Clinical Study Report generation platform for a global pharmaceutical client, built in React with CKEditor for rich document authoring, FastAPI backend integrated with LLM and RAG pipelines for document intelligence and structured report generation from unstructured clinical inputs.
- Built a workflow management platform for a leading management consulting firm, React frontend with FastAPI backend, enabling structured study and process management across complex multi-stakeholder user flows.
- Mentored client team members and junior developers through pair programming and code reviews, advocating TDD and simple design, measurably reducing deployment friction.

Application Developer – Consultant · Thoughtworks

Aug 2021 – Aug 2024

- Migrated a legacy AngularJS codebase to React + TypeScript Micro Frontends using Module Federation — enabling seamless coexistence of Angular and React at runtime so the migration could happen incrementally and built a reusable front-end component library adopted across multiple product teams, eliminating duplicated UI work and standardising design patterns.
- Worked closely with backend engineers on Spring Boot services — involved in API contract design, JWT auth setup, and debugging RabbitMQ integrations alongside the backend team

PROJECTS

- Financial Reporting Platform:** Dashboard for real-time P&L, balances, and fees across exchanges with automated reports.
- Bahmni Open Source (EMR):** Feature work across React frontend and Spring Boot backend, i18n support, JWT auth improvements, RabbitMQ integrations, and release coordination.
- Clinical Study report:** React/ FastAPI application integrating with LLM to build study reports for drugs undergoing study.
- Chatbot for Admin Console:** built with React/FastAPI, LLM, RAG and using of agentic and deterministic workflows with Temporal, aims to answer questions on admin console in interactive manner.

EDUCATION & CERTIFICATIONS

- Bachelor in Technology (Honours)** – Computer Science · NSS College of Engineering, Palakkad 2017 – 2021
- Meta Front-End Developer Certificate** · Meta HTML/CSS, JavaScript, React, Advanced React, UI/UX Design, Version Control, Frontend Capstone Sept 2024
